Service Notification

December 15, 2010

RE: MK-110P Portable Battery Chargers

We are replacing MK110P portable battery chargers that were manufactured from October 2003 through July 2006. These chargers contain a control board component that, although highly unlikely, could cause them to stop working and/or overheat which could potentially result in an unsafe condition.

To determine if your portable charger pertains to this service notification, you need to locate the date of manufacture. The date of manufacture can be determined in two ways:

1. By the date code found on the outside of the charger plain kraft outer sleeve – this is stamped in the format “2007-04-16” which would represent April 16, 2007 in this example.

2. The date code decal located on the bottom of the charger located next to the serial number decal. This decal has 4 numeric digits – the first two are the year of manufacture and the second two the month of manufacture; a date code of “0801” would be January (01) of 2008 (08).

If you have a charger within these manufacturing dates, please contact Minn Kota Technical Service at (800) 227-6433 and reference this notification for replacement.

Please accept our apologies for any inconvenience this may cause.

Sincerely-
Minn Kota Technical Service
